

Mo Shahid

Frontend Developer / React.js Developer — Full Stack (5+ Years)

+91 7570917829 | Noida, India | shahid.mansoori.378@gmail.com | [LinkedIn](#)

SUMMARY

Frontend-focused Full Stack Software Engineer with 5+ years of experience building scalable, distributed systems and AI-powered platforms using React.js and Vue.js. Skilled in Node.js, GraphQL, and RESTful APIs for end-to-end feature delivery, with working knowledge of TypeScript and basic cloud deployment (AWS/GCP). Experienced integrating LLMs into production products via tool/function calling and Model Context Protocol (MCP). Delivered e-commerce infrastructure serving 100+ retail brands with sub-100ms page loads, 99.99% uptime, and 95%+ test coverage.

TECHNICAL SKILLS

Frontend: React.js, Redux, Vue.js, Vuex, JavaScript (ES6+), TypeScript (working knowledge), HTML5, CSS3, SASS, Responsive & Cross-Platform UI, Webpack, Jest

Backend: Node.js, Express, GraphQL, RESTful APIs, MongoDB, Redis, Kafka

AI / LLM: OpenAI GPT-4o, Anthropic Claude, Google Gemini, FAL AI, LLM Tool & Function Calling, Model Context Protocol (MCP — servers & clients), Agent Memory & State Management

Cloud & Tools: AWS/GCP (basic deployment), Git, Azure DevOps, Agile/Scrum

Keywords: React.js, Vue.js, JavaScript, TypeScript, Node.js, GraphQL, Redux, Frontend Developer, Full Stack Developer, UI Engineering, REST API, MongoDB, Redis, Kafka, LLM Integration, Agile, Scrum

EXPERIENCE

Software Engineer — Programming.com (Client: FYND)

Jun 2024 — Present

FYND — E-commerce platform for retailers; white-label storefront builder powering 100+ brands (e.g., Superdry, Hugo Boss, Naksh Jaipur). Enables retailers to launch and customize customer-facing storefronts without code.

AI-Powered Storefront Designer

Stack: React, JavaScript, Node.js, Express, OpenAI GPT-4o, Anthropic Claude, Google Gemini, FAL AI, GraphQL.

- Built the frontend experience (React) for an LLM-driven storefront designer that lets retailers create and edit storefronts using plain-English instructions — reducing design time from hours to minutes for non-technical users.
- Designed the React UI layer that surfaces LLM tool/function-call results back to the user, maintains session context across multi-step design edits, and coordinates real-time preview updates.
- Integrated multi-LLM support (OpenAI GPT, Anthropic Claude, Google Gemini) end-to-end for AI-generated product content, HTML templates, image generation (FAL AI), and SEO meta tags.

Embeddable Storefront Editor — Web Component

Stack: React 18, r2wc, Redux Toolkit, Material-UI, Socket.io.

- Architected an embeddable, framework-agnostic storefront visual design tool that retailers integrate into any admin dashboard — built as a web component with configurable routing, dynamic props, and session-based auth. Published to CDN for partner integrations.
- Implemented real-time collaboration (Socket.io) and drag-and-drop layout customization; designs handed off via Figma / Adobe XD.

E-commerce Storefront Platform — Rendering Pipeline & UI Infrastructure

Stack: Vue.js, Vuex, Vue SSR, Vue Router, Webpack, Jest, React, Redis, MongoDB, Kafka, GraphQL, RESTful APIs.

- Architected a React-based SSR pipeline with a worker-thread pool for parallel page generation; multi-layer caching (Redis for HTML, LRU for compiled bundles) and hash-based cache invalidation — achieving sub-100ms render times for 10K+ daily storefront page loads.
- Built the frontend integration for an event-driven theme metadata service (Kafka), enabling real-time storefront updates across 100+ brands via a schema-driven block model rendered dynamically in the UI.

- Implemented secure rendering of retailer-provided templates (isolated-vm sandbox, forbidden-pattern validation), preventing XSS/injection in the storefront UI layer.
- Built plugin-extensible GraphQL middleware with AST-level query merging supporting 40+ partner UI extensions — a 60% reduction in API integration complexity and a 35% reduction in browser payload size via selection optimization.
- Developed the theme SDK and build tooling (dynamic Webpack entry points, section chunking), enabling third-party frontend developers to build custom storefront themes.

Software Engineer — Dassault Systèmes

Dec 2021 — Jun 2024

Sales Compensation App

Stack: JavaScript, Vue.js, jQuery, RequireJS, HTML5, CSS3, SASS, Element Plus Grid, jqGrid, AG-Grid, Highcharts.

- Built an enterprise UI to create sales plans with objectives and assignments, calculate compensation across multiple dimensions and scopes of work, and monitor performance through grids, charts, and Excel reports.

Client Repository

Stack: React.js, HTML5, CSS3, Ant Design, Highcharts.

- Built a React-based enterprise UI providing a central repository of current and potential client data, organized by industry, sector, and geography — monitoring revenue generation and client relationships, and facilitating lead creation for sales.

Cross-Cutting Responsibilities

- Served as UI Software Engineering Specialist, responsible for responsive and cross-platform UI development for enterprise sales products, delivered through Agile/Scrum cycles on Azure DevOps.
- Led UI development in Vue.js and React.js — collaborated with business stakeholders to plan enhancements, estimate and define requirements, and verify Figma/Adobe XD design mockups. Designed JSON contracts and integrated with RESTful APIs.
- Developed feature-rich UI grids with custom components — controllers, inline editing, mass editing.
- Migrated legacy UI code from Vue 2 to Vue 3 and from Element UI to Element Plus.

Consultant — Kelly Services India

Nov 2019 — Apr 2020

- Provided support and operations for Uber.

EDUCATION

Bachelor of Technology — Electronics and Communication Engineering

Bundelkhand University, Jhansi | Jul 2015 — May 2019
